About the Project

The Flood Control District of Maricopa County (District) awarded a contract to FNF Construction, Inc. to construct the Loop 303 Outfall Drainage System. The new outfall drainage system will collect and carry stormwater runoff to the Gila River and reduce the chance of property damage and flooding to the future freeway and adjacent areas during a major storm event. Drainage improvements include construction of a concrete-lined channel, box culverts, storm drain pipe, retaining walls and landscaping. Additional improvements include street and irrigation system reconstruction for the Roosevelt Irrigation District (RID) and Buckeye Water Conservation and Drainage District (BWCD).

Project completion is scheduled for fall 2015. Construction work hours are 6 a.m. to 7 p.m., Monday through Friday; hours will vary with seasonal changes. Construction crews may work evenings and weekends, if needed.

Construction Activity Update

Construction got underway in October. Crews began installing irrigation pipe and structures, placing concrete for box culverts, channel lining and retaining wall footings, and excavating the new channel. Currently, the contractor is installing storm drain pipe on the west side of Cotton Lane between Lower Buckeye and Yuma roads and excavating the channel from the Gila River to MC85.

Upcoming Traffic Restrictions

In January, expect traffic restrictions on MC85 between Southern Avenue and Cotton Lane to facilitate installation of a box culvert. Please be aware of construction trucks entering and exiting the construction area. Allow extra time when traveling through the work zone as there may be traffic delays. Access will be maintained for residents, businesses and emergency vehicles at all times.

Thank you for your patience and cooperation.

For More Information

If you have questions or would like more information about the improvement effort, please call the 24-hour construction hotline at (602) 264-6416. We are happy to answer your questions and assist you in any way we can.
